

2024 Product Catalog

Payer Eyes - WELCOME!

Payer Eyes has done more than refine an old tradition; we've started a new one. Guided by our unyielding desire to produce the most life-like glass eyes on the market, our glass eyes capture the natural colors and reflective qualities of the animal's original eyes in flawless detail.

Payer Eyes specializes in making the world's most exceptional glass eyes for taxidermy. Utilizing proprietary state-of-the-art decorating techniques, Payer Eyes has created the most exact representation of the living eye in the market today.

Now part of the McKenzie family of brands, Payer Eyes products are manufactured by the Payer family, and ship directly from Texas. Combining McKenzie's industry-leading customer service with Payer's ultra-realistic, high-quality products allows us to offer you the best experience possible.

Payer Eyes - Please, allow us to introduce ourselves

Crafted of high quality glass and decorated to the highest standard, all Payer Eyes are made to satisfy the professional taxidermist, woodcarver or craftsperson with the best solution possible for their current project. We offer several lines of glass eyes which provide different looks and degrees of refinement, all in order to accommodate the varying tastes of our customers.

Keep in mind, all Payer eyes are kiln-fired, extremely durable and completely color-fast - only glass eyes impart these desirable qualities.

Below are eight examples showing our Whitetail Deer (Light) in various configurations. Note that the top four show what we call a "symmetrical lens", while the bottom four show "weight forward". Not all species are available in all of these configurations; please refer to the appropriate catalog page for a comprehensive listing.

While still a premium quality product, our most economical line is Unbanded. Unbanded glass eyes show all iris and pupil and use a symmetrical lens with consistent decoration for the look that will satisfy the budget conscious customer with a beautiful glass eye that will last virtually forever.

Payer Eyes offers several lines of glass eyes with scleral bands. Payer eyes that have scleral bands are available with or without veining. Veining is done by hand painting the lines prior to firing, thus ensuring the durability you expect from us.

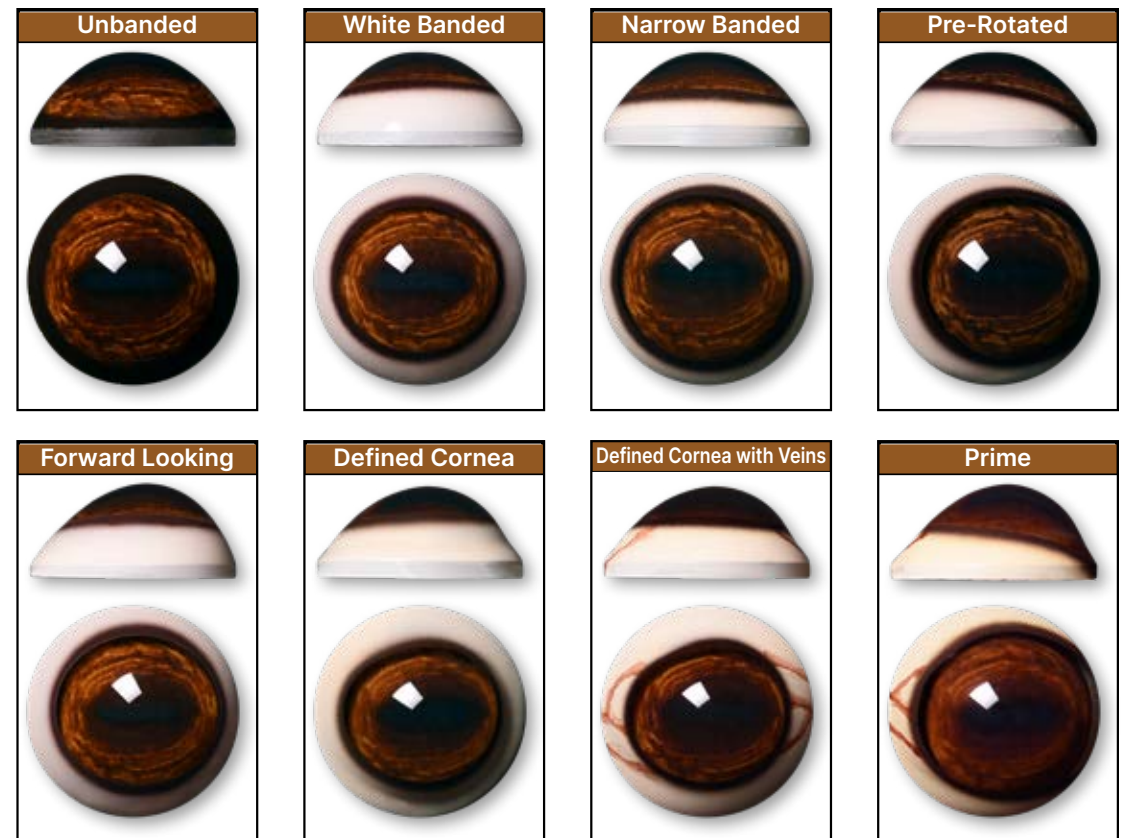

Beginning with White Banded, we also offer Narrow Banded, Pre-Rotated and Forward Looking, all with similar pricing. White Banded, Narrow Banded and Pre-Rotated Payer eyes use a symmetrical lens with very consistent decorating for the iris and pupil.

The Pre-Rotated line of glass eyes provides a more action oriented look and feel; consider using Pre-Rotated eyes in a situation where the subject being depicted might be prey or if the desired look is an off-centered focus or a pose involving a hard turn.

Payer's Forward Looking eye is our least expensive solution providing a "weight forward" look and feel. These are similar in pricing to our White Banded, Narrow Banded, and Pre-Rotated lines yet they have a corneal offset to emulate the shape of a natural eye a bit more closely.

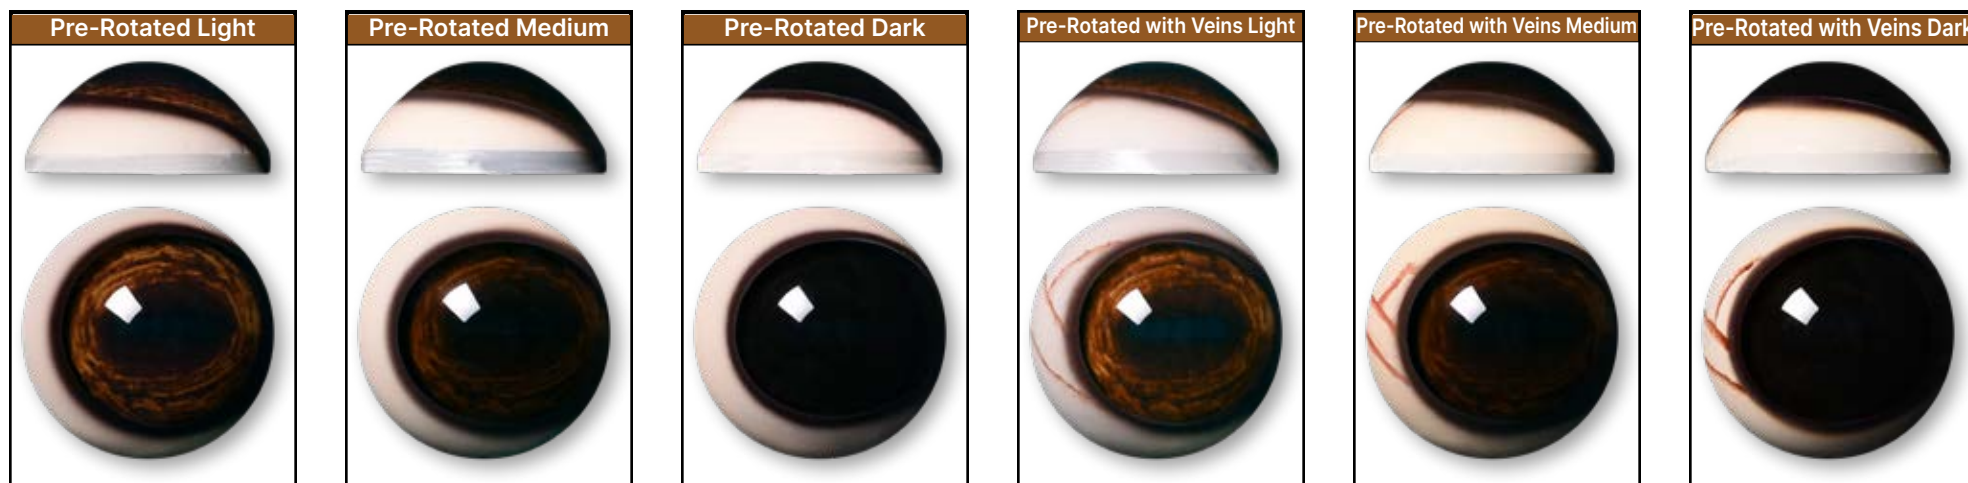

With a much more natural look, Payer's Defined Cornea line has proven to be extremely popular. With a corneal offset and a more complex curvature to its shape, this life-like eye provides a very realistic impression in a finished piece. Like all of our other lines, count on consistent decoration and finishing in the Defined Cornea variety.

When nothing but the best will do, Payer is proud to offer the Prime line of glass eyes. These are made to replicate nature as closely as possible with a shape exclusive to this line and veining included. Simply put, this is the best glass eye we offer.

Please note: Throughout this catalog, all pricing is in US dollars and unit pricing is for a pair of eyes.
